

**100%
biodegradable**

**100%
microplastic-
free**

No microplastic

Unlike conventional petroleum-based tree shelters, which generate large amounts of microplastics as they degrade in the forest, the ARBOTRADE Tree Shelter is completely degraded by microorganisms under forest conditions.

Circular economy

In contrast to conventional tree shelters, the ARBOTRADE growing media is 100% biodegradable under forest conditions. This means that the new ARBOTRADE Tree Shelter is not only ecologically clean and sustainably available, but also decomposes into pollutant-free biomass.

4+ years of service life

Thanks to our composition, specifically optimized for use in forest areas, our ARBOTRADE Tree Shelter has a service life of at least 4-5 years depending on the location, making it perfect for protecting seedlings!

Protection against browsing

Of course, our biodegradable ARBOTRADE Tree Shelter provides protection against game browsing just as effectively as conventional products.

Ready-to-use delivery

Our ARBOTRADE Tree Shelter is delivered flat to save space. Thanks to its simple folding design, the ARBOTRADE Tree Shelter is ready for use in seconds without any tools. You can also obtain the matching, 100% biodegradable ARBOTRADE Cable Ties from us.

Award-winning material

The ARBOTRADE Tree Shelters and the corresponding ARBOTRADE Cable Ties are made entirely from the plant-based, multi-award-winning bioplastic ARBOBLEND and are 100% biodegradable under forest conditions.

Creation of a microclimate

Just like conventional tree shelters, the closed shape of the ARBOTRADE Tree Shelter creates a microclimate that leads to improved height growth for the seedling.
