

Assembly instructions

ARBOTRADE Tree Shelter

1. Transportation

Due to its light weight, the ARBOTRADE Tree Shelter can be transported to the stands in large numbers.

2. Shaping into round form

The tabs are pressed into the holes **from the outside** to form the tree shelter into a round shape.

3. Attaching cable ties loosely

The ARBOTRADE Cable Ties are threaded through the holes provided and tightened loosely.

4. Attaching the tree shelter

Position the tree shelter over the seedling and thread the cable ties over the support post and tighten them securely. The zip ties will now hold the tree shelter in its round shape and secure it to the support post.

Tip: We recommend that you prepare several shelters up to step 3 and then attach them to the seedling in step 4.
